📁 Portfolio

Education

B.Tech in Computer Science & Engineering

Shiv Nadar University, Chennai

CGPA: 8.16

August 2023 – May 2027

Technical Skills

- **Languages:** JavaScript, TypeScript, Python, Java
- **Frameworks/Tools:** Node.js, Express.js, Next.js, Nest.js, Tailwind, Docker, WebRTC, WebSockets, Socket.IO, Prisma ORM, Git, GitHub
- **Databases:** MySQL, PostgreSQL, Supabase
- **CS Fundamentals:** OS, DBMS, DSA, OOP, Computer Networks
- **Other:** REST APIs, Figma, Postman, Hyperledger Fabric, Linux

Experience

Software Engineer Intern – FutureNet Technologies

May 2026 – July 2026

ITSM Ticketing System

NestJS, React, TypeScript, PostgreSQL, Prisma

- Developed an enterprise **ITSM platform** featuring a full-stack routing engine across **10+ service groups** (Cloud, Security, RIMS) that auto-assigns tickets into hierarchical subqueues across **8+ configurable lifecycle states**.
- Secured the ecosystem using **JWT + RBAC/PBAC** across **4 permission tiers**, implementing custom auth guards over **39 protected API endpoints** and enforcing role-isolated data access at both the API route and React component levels.
- Built a high-precision **SLA breach engine** with conditional timer tracking and cron-backed polling guaranteeing sub-60s latency, integrated with a **no-code admin panel** managing **5 core entities** across **25+ parameters** with **0 downtime** and an **immutable field-level audit log**.

TechBuddy

NestJS, React, TypeScript, PostgreSQL, Prisma

- Engineered bulk import pipelines for 6 entity types with Excel parsing, schema validation, and atomic transactions — processing 3,000–5,000 rows per import with partial-failure row-level error reporting.
- Designed and built a full-featured **data grid** to include Group By sorting, column visibility toggles, saved view presets via localStorage, and batch actions (bulk import, delete, Excel export), backed by a **Prisma aggregation layer** normalizing nested responses.

Software Testing Intern – Uniify

May 2025 – July 2025

- Executed **150+ test cases** across Uniify's web panel and mobile app (**92% coverage**), catching **35+ critical defects** ahead of the **Uniify Nova** launch.
- Ran **5+ regression cycles** per release, cutting duplicate defects by **25%** through structured documentation and optimized test workflows.

Projects

DevBoard – Real-Time Collaborative Code Editor

March 2026

Engineered a real-time collaborative code editor with multi-user live sync, cursor presence tracking, and inline review comments — handling concurrent edits without conflicts using Socket.IO event architecture.

Tech stack: Next.js, TypeScript, Socket.IO, PostgreSQL, Prisma, Monaco Editor, Tailwind CSS

Blockchain B2B Financing Platform

April 2026

Designed and implemented a permissioned Hyperledger Fabric network to automate B2B invoice financing, with Go smart contracts enforcing fraud prevention logic; eliminating double disbursement, invoice tampering, and fund diversion at the protocol level.

Tech stack: Hyperledger Fabric, Go (Chaincode), Node.js, Docker, REST APIs

Snap It – P2P File Sharing App

November 2025

Built a serverless P2P file transfer app in the browser using WebRTC, with zero server-side storage. Developed a Node.js signaling server for peer discovery and connection negotiation, enabling direct device-to-device transfers with no upload latency.

Tech stack: JavaScript, WebRTC, WebSockets, Node.js, HTML, CSS

Certifications & Courses

• Full-Stack Web Development – Udemy

February 2025 – May 2025

• Programming in Java (Elite + Gold) – NPTEL, IIT Kharagpur

January 2026 – April 2026

Leadership & Achievements

- **Event Head, SNUC Gaming Club:** Organized **7+** major events including Instincts 2025, with 150+ participants.
- **Open Source Contributor:** Debugged and optimized 5+ production codebases, resolving critical authentication, routing, and layout bugs to elevate user navigation and system stability.
- **Finalist, Spectrum'25:** Secured a position in the **top 50** out of **500+ teams**.
